PROJECT 08 — SLA & TAT PERFORMANCE DASHBOARD

Project Type: Operational SLA & Turnaround Time (TAT) Reporting

Tools: Microsoft Excel | Power Query | Power BI

Project Overview

Built an operational reporting solution to clean ticket data, apply SLA rules, calculate TAT and SLA compliance, monitor breaches and open tickets, compare team performance, and present management insights through Excel and Power BI dashboards.

Key Results

• Total Tickets: **35**

• Average TAT: **27.5 hours**

• Overall SLA Compliance: **82.35%**

• SLA Breach Rate: **17.14%**

• SLA Breaches: **6**

• Open Tickets: **1**

Team Analysis

• Support SLA Compliance: **94.44%**

• Technical SLA Compliance: **68.75%**

• Support Average TAT: **28 hours**

• Technical Average TAT: **27 hours**

Management Insight

Technical has materially lower SLA compliance than Support despite similar average TAT. The analysis highlights the need to review Technical SLA adherence and priority handling. Technical accounts for 5 of the 6 SLA breaches.

Power BI Dashboard

The final Power BI dashboard presents four headline KPIs — Total Tickets, Average TAT Hours, SLA Compliance %, and SLA Breach %. It also provides team-level SLA compliance and TAT comparisons, ticket status distribution, an interactive Team filter, and a management insight section. The latest PDF export uses an enlarged dashboard layout so the report occupies the page more effectively.

Workflow

Raw ticket data → Power Query cleaning/transformation → SLA & TAT calculations → Excel reporting model → Power BI model/DAX → interactive team filter → management insight.

Portfolio Evidence

Excel MIS workbook; Excel dashboard PDF; Power BI PBIX workbook; updated Power BI dashboard PDF; Power Query documentation/practice PDF.

Skills Demonstrated

Power Query, ETL, data cleaning, SLA analysis, TAT analysis, KPI reporting, Excel dashboards, Power BI, DAX measures, interactive filters, data visualization and management reporting.
